

NWH high-sensitivity Troponin T algorithm

Not to be used for HEART score ≥ 7 , sepsis, non-cardiac symptoms, STEMI, diagnostic EKG or has good alternative diagnosis

If maximal chest pain < 3 hrs ago, obtain second hsT 3 hrs after initial

Indeterminate troponin not a sole criterion for telemetry or admission

Chronic troponin elevations w/o AMI are seen in pts with stable CAD, CHF, CKD, LVH, PE, Pulmonary HTN, and other diseases: Use Δ hsT to determine acute injury
